

Great opportunity for the right Traffic Engineer

Are you looking for the opportunity of capitalising on your traffic management and transport planning experience and becoming your own boss within a supportive and experienced small team and friendly environment?

We are a Sydney based progressive and long standing consultancy with a portfolio of blue-chip clients throughout Australasia looking to expand our range of services into the area of traffic engineering. As the successful candidate you will lead and develop a new division of the business. You will need to have:

- Relevant tertiary qualifications and demonstrated experience (5-10 years) in the field of traffic engineering and an in-depth knowledge of modelling packages, Australian Standards and CAD skills.
- Demonstrated ability to manage multiple projects with competing deadlines and to achieve quality outcomes within agreed timeframes and budgets with minimal supervision.
- An existing network of contacts in traffic, parking, property and/or local government and potentially a portfolio of clients.
- Proven skills in business development with a strong commercial approach whilst delivering professional services of the highest standard.
- Demonstrated commitment to continuing professional and self development.
- Excellent written and oral communication skills.
- Demonstrated problem solving skills, initiative and ability to respond effectively to change.
- The ability to interpret and apply guidelines and legislation effectively in a statutory/regulative environment.
- Experience in parking projects and design of off-street parking layouts.

Our highly valued staff are rewarded with a range of benefits tailor made to the individual's requirements and talents.
